

Main Goal of The Project

The main goal of the project is to simulate a rocket launching environment. To present the different processes involved in a rocket launch:

- The Initial stage
- Preparing the Load/Astronaut
- For Astronauts we take some information about them before launch and we store it in a file
- Checking All systems before launch
- The Launch
- The graphical part of this project

To do that:

- Prepares the database for each Astronaut for Human space mission.
- For rocket and satellite launch we check different stages of launch.
