

Introduction

We will begin with a brief introduction about this project and the different stages of the design and the development of **ROCKET LAUNCHING SYSTEM**. Before detailed discussion, first of all I would like to give an overall idea about this project.

"ROCKET LAUNCHING SYSTEM"

We developed our project on **ROCKET LAUNCHING SYSTEM**, which try to simulate the real launching procedures. But it has a twist and it is bit customized. Our project basically tries to simulate the final stages of a rocket launch.

Our Rocket carries lodes like satellite and rover to space and accomplish complex Human space missions. We also added some graphics to show the launching procedure.
